

2019 Rebates

For Residential Electric Space & Water Heating

TWIN VALLEYS
PUBLIC POWER DISTRICT

<u>System Type</u>	<u>SEER Rating</u>	<u>TVPPD Rebate</u>	<u>EnergyWise Rebate</u>	<u>Total</u>
Air Source Heat Pump (natural gas or propane backup)	15-15.9*	\$100	\$400	\$500
	16-17.9*	\$200	\$800	\$1000
	18+*	\$300	\$1,200	\$1500
	Variable capacity	\$300	\$1,200	\$1500
Air Source Heat Pump (electric furnace backup)	15-15.9*	\$300	\$400	\$700
	16-17.9*	\$400	\$800	\$1200
	18+*	\$500	\$1,200	\$1700
	Variable capacity	\$500	\$1,200	\$1700
*15-18+ SEER must have 12.5 EER & 8.5 HSPF to qualify for any rebate amount				
Geothermal Heat Pump (Variable Capacity)	Any EER	\$1300	\$2,400	\$3700
	35+ EER	\$1300	\$3,300	\$4600
Resistance Heat (furnace, baseboard or cove)		\$200		
Resistance Water Heater (40 gallon or larger) See guideline 12. on back		\$250		
Desuperheater (Geothermal heat pump water heating)		\$150		

More Rebates Available. Visit www.twinvalleysppd.com for brochures and guidelines.

Guidelines:

- 1) Incentives apply for new construction, conversion from fossil fuel to electric or air conditioning to a heat pump, and upgrades of existing heat pumps to a new pump.
- 2) All air source heat pumps must be at least a 15 SEER, 12.5 EER and 8.5 HSPF or higher efficiency rating.
- 3) An AHRI or EnergyStar certificate is required for all heat pumps. If a certificate is not attached to the verification form the maximum incentive will be \$100.
- 4) All space heating and water heating equipment must be permanently installed and operating in a residential single-family dwelling.
- 5) Mobile homes meet the criteria for residential classification if designed for year round living, set on a permanent foundation, skirted, permanent utilities are installed and the towing provisions and running gear are removed.
- 6) A cabin must be heated during the winter months of October to May.
- 7) Duplexes or Condominiums must be separately metered to be eligible.
- 8) The installing dealer must do a "performance verification" test per the EnergyWise program guidelines to assure that the heat pump is operating within 10% of the manufacturer's specifications.
- 9) All incentives will be paid when this verification test and application form is received by Twin Valleys Public Power District.
- 10) When two or more heat pumps are installed in the same house, both or all are eligible for the full rebate amount.
- 11) Package Terminal Heat Pumps (PTHP's) are not eligible. Only split system heat pumps with a ducted supply and return system and the duct-less mini-splits are eligible.
- 12) Installation of the water heater must be new or a conversion from a fossil fuel and in connection with electric heating. The home needs to qualify for Twin Valleys Public Power District's all-electric rate.
- 13) A copy of the paid invoice must accompany the rebate request.
- 14) The desuperheater rebate and the resistance water heater rebate can both be received by the homeowner if both are installed.
